

GYMatch

Phase 2 - Production Build Proposal

From MVP to a Market-Ready, Revenue-Generating Platform

Prepared for

September 2026

1. Where We Are, and Where This Takes Us

GYMatch's first phase delivered exactly what a Phase 1 MVP is meant to deliver: a working proof of concept, built to validate the idea rather than to carry real, paying users. That was the right call at the time - it let us test the concept before investing in production-grade engineering.

Now that GYMatch is ready to move toward real users and investment conversations, the goals change. An MVP that is "good enough to prove the idea" is not the same product that needs to hold up under daily use, scale, and scrutiny from users, gym owners, and investors. Phase 2 is that transition: turning the validated concept into a production-ready application with a smoother user experience, a proper mapping backend, and - critically - the features that let GYMatch actually make money.

This document lays out every feature on the table for Phase 2, what it does and why it matters, along with the estimated timeline and cost for each - so you can see the full picture and decide what to prioritize and what to phase in later.

2. Foundation Upgrade (Core, Recommended for All Users)

These two items are the backbone of the production release. Nearly every other feature in this proposal builds on top of them, so we'd recommend treating these as the starting point regardless of which additional modules you choose.

2.1 User Experience Overhaul (App + Admin Panel)

The current app was built as an MVP, and MVP UX is intentionally minimal - it proves the concept, not the daily habit. Since we agreed at the outset to keep Phase 1 lean and only invest in a polished UX once there was budget or investment behind it, this is that moment.

This is not a visual redesign - we are not changing the UI's look and feel. Instead, we will restructure how modules and actions are arranged so the app feels intuitive and effortless to navigate, which directly improves user retention and the first-time experience investors and new users will judge the product on.

Estimated Timeline	Investment
20 – 25 working days	\$500

2.2 Map Infrastructure Rebuild

We will migrate gym location data out of the legacy app and rebuild the map layer entirely on open-source infrastructure - OpenFreeMap, Leaflet.js, and OpenLayers (exact combination to be finalized once we benchmark performance) - instead of relying on paid, quota-limited map APIs.

- Pulls and migrates existing gym location data from the legacy app
- Removes dependency on paid map APIs and their usage quotas, protecting the app from unexpected costs or outages as usage grows
- Lays the groundwork all location-based features (gym discovery, partner matching, check-ins) depend on

Estimated Timeline	Investment
25 – 35 working days	\$2,000

3. Engagement Features

These features give users a reason to open the app daily, beyond simply searching for a gym. They also lay the groundwork for the monetization modules in Section 4.

3.1 Training Modules & Workout Plans

A free tier of pre-built workout plans for every user, with an advanced tier - including AI-generated, personalized plans - available as a paid add-on.

- Free: a library of predefined workout plans, similar in spirit to apps like Home Workout and Fitness22
- Paid add-on: AI-generated plans based on user inputs - goal (e.g., muscle gain), experience level, days per week, available equipment, and session length
- Requires sourcing workout images/videos (via a designer, video editor, or AI-generated content - to be discussed) to populate the training library

Estimated Timeline	Investment
25 – 35 working days	\$3,000

3.2 Gym Reviews & Ratings

Lets users rate and review the gyms they visit, building the trust signals that help new users choose where to go - and giving gym owners direct feedback.

Estimated Timeline	Investment
5 – 10 working days	\$50

3.3 Workout Partner Matching

A dedicated matchmaking system so users can find people to work out with - turning GYMatch from a directory into a genuine community tool.

- Advanced filters: age range, fitness level, goals, preferred workout, preferred gym, workout days/time, gender preference, distance, and more
- Natural, filtered search such as "find people who work out at my gym around 6–8 PM"
- Full interaction flow: send/accept/reject partner requests, in-app chat, schedule a workout, view partner availability, block/report, and leave feedback

Estimated Timeline	Investment
15 – 25 working days	\$500

4. Monetization Modules - Gym Owners

This is where GYMatch turns into a real business. Rather than a rigid Basic/Standard/Premium tier structure, we recommend a lean core plan for gym owners with the modules below available as individual add-ons - so owners only pay for the value they actually want, and you can price and bundle them however performs best.

4.1 Featured / Sponsored Gym Listings

Gym owners can subscribe to feature their gym prominently on the home screen, with pricing tied to the radius they choose around their location. Owners can also list current equipment availability as part of the featured listing.

Estimated Timeline	Investment
10 – 15 working days	\$200

4.2 Custom Gym Media

Gym owners can upload custom images, videos, or an introduction video to showcase their gym and attract new members directly through the app.

Estimated Timeline	Investment
10 – 15 working days	\$150

4.3 Gym Community Groups

Every gym gets an automatic in-app group that all of its GYMatch users are added to. Owners can post notifications and gym-specific updates (e.g., opening/closing status), giving members a concrete reason to open the app before heading to the gym.

Estimated Timeline	Investment
10 – 15 working days	\$200

4.4 Gym & Member Management (App + Admin Panel)

A full membership management system for gym owners, spanning both the mobile app and the admin panel - who's paid, who's overdue, and who's currently at the gym.

- Member fee tracking: which members are paid up this month vs. currently unpaid
- Gym check-in via QR code, membership integration, or manual admin entry
- Live occupancy signal in-app (e.g., "42 people currently working out at XYZ Gym"), which also strengthens partner-matching by showing who's currently free to team up
- Commission model: gym owners earn a commission when their members purchase paid add-ons, giving them a direct incentive to promote the app to their members

Estimated Timeline	Investment
35 – 40 working days	\$2,500

4.5 Affiliate Revenue (Gym Products)

Gym owners can list and sell protein, apparel, shoes, equipment, supplements, and accessories through the app, generating an affiliate commission for GYMatch on every sale.

Estimated Timeline	Investment
30 – 40 working days	\$1,500

4.6 WhatsApp AI Chatbot for Gym Owners

Gym owners connect their own WhatsApp number and a short setup form; the backend then auto-configures an AI chatbot that answers member inquiries and handles routine communication automatically - no ongoing effort required from the owner.

Estimated Timeline	Investment
10 – 15 working days	\$1,000

4.7 Gym-Branded Training Programs

Gym owners can create and sell their own training plans or subscriptions directly to their members through the app, turning their existing coaching expertise into an additional revenue stream.

Estimated Timeline	Investment
20 – 25 working days	\$500

5. Monetization Modules - App Users

Lightweight, low-cost features that give individual users a reason to upgrade, while deepening engagement on the social side of the app.

5.1 Featured Partner Listing

Users can feature themselves within a chosen gym and radius, increasing their visibility to others looking for a workout partner.

Estimated Timeline	Investment
5 – 10 working days	\$100

5.2 Social / Community Feed

An Instagram-style social layer built around fitness content, keeping users engaged with each other and not just with gym search.

- Post workout images/videos, progress updates, and transformation photos
- Share achievements, follow other users, like and comment
- Create fitness groups

Estimated Timeline	Investment
25 – 35 working days	\$2,000

Note: the training-module feature for individual app users draws on the same system built in Section 3.1, so no additional cost applies here.

6. Investment Summary

The table below summarizes every feature above. Timelines are estimates for that feature in isolation - features built in the same phase can often overlap, so total calendar time will typically be shorter than the sum of all ranges.

Feature	Working Days	Investment
2.1 UX Overhaul (App + Admin)	20 – 25	\$500
2.2 Map Infrastructure Rebuild	25 – 35	\$2,000
Foundation Upgrade - Subtotal	45 – 60	\$2,500
3.1 Training Modules & Workout Plans	25 – 35	\$3,000
3.2 Gym Reviews & Ratings	5 – 10	\$50
3.3 Workout Partner Matching	15 – 25	\$500
Engagement Features - Subtotal	45 – 70	\$3,550
4.1 Featured / Sponsored Listings	10 – 15	\$200
4.2 Custom Gym Media	10 – 15	\$150
4.3 Gym Community Groups	10 – 15	\$200
4.4 Gym & Member Management	35 – 40	\$2,500
4.5 Affiliate Revenue	30 – 40	\$1,500
4.6 WhatsApp AI Chatbot	10 – 15	\$1,000
4.7 Gym-Branded Training Programs	20 – 25	\$500
Gym Owner Monetization - Subtotal	125 – 165	\$6,050
5.1 Featured Partner Listing	5 – 10	\$100
5.2 Social / Community Feed	25 – 35	\$2,000
App User Monetization - Subtotal	30 – 45	\$2,100
GRAND TOTAL (All Features)	245 – 340	\$14,200

We don't recommend building all of this at once. A practical path is: Foundation Upgrade first, then layer in Engagement Features and Monetization Modules in the order that matches your go-to-market and funding timeline. We're happy to sequence this into milestone-based phases once you've reviewed the options.

7. Suggested Next Steps

- Review this proposal and flag which modules are must-haves for your production launch vs. later add-ons
- We'll turn your selections into a phased delivery plan with milestones and payment checkpoints
- Kick off with the Foundation Upgrade (UX + Map Infrastructure) so every other module has a stable base to build on

Looking forward to building the production version of GYMatch with you.

- Muhammad Junaid
